GUIDELINE EXECUTION TASK ONTOLOGY (GETO)

ABSTRACT OF THE DISCLOSURE

[00275]   The present invention provides methods for extracting generalized guideline execution tasks from a guideline representation model. The present invention further

5   provides methods for integrating generalized guideline execution tasks into a generic guideline representation model. The present invention also provides methods and systems for providing a generic guideline representation model for use by a guideline execution engine. Finally, the present invention provides methods and systems for enabling a user to map between a guideline representation model and a generic guideline representation model.
